TOTAL ADDITIONAL WEIGHT: 9.7

As a result, the model is able to capture the temporal dependencies between the input and output sequences. The model is trained using a loss function that measures the difference between the predicted and actual output sequences. The model is trained using a dataset of input and output sequences, and the training process involves iteratively adjusting the model parameters to minimize the loss function. The model is then evaluated using a separate dataset to assess its performance.

33 MPG
